

ATTORNEY DOCKET NO. 2799CIP

PROPOSED CLAIM CHANGES
(Clean Copy)
SERIAL NO. 09/557,822

1. (Once Amended) A computer based system for reducing user errors in ordering freight services comprising:

- a) a server computer;
- b) a distributed network connected to the server computer;
- c) a user computer connected to the distributed network which can interact with the server computer;
- d) a database on the server computer containing accessorial service information; and
- e) programs or software for sequentially displaying a plurality of accessorial services and requiring the user to address each of said accessorial services offered and to accept or decline said accessorial services wherein said services comprise two or more of the following: arrival notification, construction site, inside delivery, liftgate service, residential delivery, residential pickup, and Saturday pickup.
